SUMMARY

Frontend and backend developer with a love for developing eye-pleasing, interactive web sites and web applications. Leveraging my front end & back end development skills seeking an environment that will present the fast pace challenge.

EDUCATION

Bachelor of Engineering (CSE)

Dr. Subhash Technical Campus
2021-2025

HSC

Sorath International School
2020 – 2021

TECHNICAL SKILLS

- HTML/CSS
- Php
- MySQL
- Postgres
- Basic React.js
- Node.js with Sequilizer
- Express.js

PROFESSIONAL EXPERIENCE

Full Stack Developer

Xpert Lab | January - Present

- Developed and implemented responsive user interfaces, enhancing user experience across various devices and platforms
- Working with the wider development team.
- Manage website design and complete many projects

PROJECTS

» 1.Attendance Management System

Technologies Used: Node.js , Postgres

- Developed a comprehensive management system with robust functionalities for educational institutions.
- The system efficiently manages student lists, faculty, and staff, along with structured timetables and holiday schedules.
- Key features include student verification, streamlined staff-to-subject allocation, and an intuitive interface for managing multiple colleges, ensuring smooth administrative operations.

» 2. Loan Software

Technologies Used: Php, MySQL

- Developed a dynamic loan management software designed to streamline financial operations for lenders and borrowers.
- Core features include loan application processing, EMI payment management, total balance tracking, loan closure options, and detailed credit/debit handling.
- The software also provides a comprehensive history management module, enabling easy access to transaction records and enhancing financial oversight.

» 3. Pandit Booking Website

Technologies Used: Php, MySQL

- Developed a dedicated Pandit booking platform that simplifies the process of scheduling religious services.
- Users can book pandits, view upcoming and past bookings, and have the flexibility to update or cancel their reservations, ensuring a user-friendly experience for managing spiritual needs

» 4. Inventory Management Software

Technologies Used: React.js , Node.js , Postgres

- Designed and developed a robust Inventory Management Software with comprehensive features for efficient stock management.
- The system enables stock tracking, purchase and sales processing, and history management.
- Additional functionalities include vendor addition, profile management, and a request feature for superadmin approval on edits.
- It also supports bulk data upload through Excel files, allowing seamless data integration and storage in the database.

» 5. Project Management System

Technologies Used: React.js, Node.js, Mysql

- Developed a streamlined Project Management System with features to manage user profiles and monitor project activity.
- Administrators can view and edit user details, track projects added by users, and receive real-time notifications via Firebase, enhancing project oversight and communication efficiency.

» 6. Way payroll

Technologies Used: PHP, Mysql

- Developed a comprehensive Payroll Management Software designed to handle large-scale employee and company data efficiently.
- The software streamlines corporate payroll calculations, including salary processing, tax deductions, and challan generation.
- It manages complex calculations and ensures accurate record-keeping, generating detailed reports for payroll operations.

Key features include employee data management, automated salary computation, compliance with tax regulations, and customizable reporting for enhanced corporate payroll oversight.
